

Is there a project your company wants to implement, but is needing guidance to get it off the ground? Does your business lack the resources to manage projects and help propel them forward to completion?

InStream's Project Management as a Service (PMaaS) offering allows you to keep your focus on outward, revenue generating business, while still ensuring internal projects get completed on time and on budget.

PROJECT MANAGEMENT AS A SERVICE

BRING INSTREAM ONTO YOUR TEAM

With InStream's team of certified Project Management Professionals (PMPs), you can rest easy knowing your project is in qualified hands. Here's a more detailed look at what parts of the project we can help you with when you bring InStream onto your team:

INITIATING

Your dedicated Project Manager will work with you to develop the project charter, which will define the initial, high-level requirements and key deliverables of the project. This time will also be used to identify project stakeholders and business benefits.

PLANNING

The Project Manager will work with your business to establish the total scope of the project, including the requirements, effort, and objectives, and develop a course of action to execute them.

We will also:

- > Define project activities and identify resources needed
- > Develop a timeline for the project with milestones
- > Identify potential project risks and plan for contingencies
- > Compile project information into a project plan

EXECUTING

The Project Manager will oversee the work being done by the team as it was earlier defined. This involves coordinating resources, managing stakeholder engagement, and supervising the resources to ensure the work is being performed according to the project plan.

MONITORING & CONTROLLING

Throughout the project, the Project Manager will be responsible for collecting performance data to produce and distribute reports regarding project progress. These reports will display statistics such as planned versus actual progress, variances, and trends.

CLOSING

Once formal acceptance has been received for the project, the project will be complete, and the final "I's" will be dotted and "T's" crossed. Post-completion deliverables, such as reports, lessons learned, and other forms of documentation, will also be delivered at this time.
