

# MOORESVILLE CONSOLIDATED SCHOOL CORPORATIONS INSTREAM CASE STUDY

Mooreville Consolidated School Corporation (MCSC) is located in Morgan County, Indiana, and consists of one high school (grades 9-12), one middle school (grades 7-8), and five elementary schools (grades K-6).

## The Problem

Mooreville Consolidated School Corporation (MCSC) has 305 certified and 125 non-certified staff members. More than 4,350 students attend Mooreville schools. The district includes residents of Brown, Harrison, and Madison Townships in Morgan County, Indiana.

While working with MCSC it was determined that they needed a more cost effective way to file, search, and transfer school records to colleges and universities. They also identified a need for a better disaster recovery plan for all of their school records from 1960 to present.

per week for hourly  
employee costs

## The Solution

It was determined that a FileBound document management solution would not only meet their needs but was also at a price point that they could afford. This new solution automates the way they manage and protect their school transcripts, human resource files, and other records within the organization. FileBound allows them to securely access and share transcripts with outside requestors in a much more efficient way.

Secure access to files  
and records

## The Results

According to MCSC, they realized a \$55,000 savings by purchasing FileBound compared to other solutions that they considered. They also estimate a savings of \$1,000 per week for hourly employee costs. MCSC also saved approximately \$3,000 in filing cabinets, labels, hard copy records, and other storage materials. The bottom line is that this system saved MCSC both time and money, and resulted in a more efficient running organization.
