

InStream Solutions Designed for Your Business

For IT Partners

WHY ADD INSTREAM TO YOUR TEAM

At InStream, we understand the importance of having streamlined business processes. Maintaining your systems at peak efficiency on secure servers is crucial to their success. Software must be modernized and managed accordingly to sustain profitability. Planning and implementing updates, enhancements, and security checks can be arduous tasks that shift employees focus from high level tasks. Turn to InStream to complete IT tasks and achieve your unique business goals.

MAXIMIZE WORKFLOW EFFICIENCY

Maximize efficiency within your organization by creating a workflow system with InStream using our experts and the power of automation.

INSTREAM HAS:

- > Decades of combined experience in the automation and advanced capture industry.
- > Experts across all fields who are ready to help you automate processes and improve workflow.
- > Committed to providing the best customer experience for each of our clients.
- > Employees nationwide who provide comprehensive services across the United States.

FOCUS ON WHAT MATTERS MOST

Allow InStream to optimize your current software and maximize its potential within your organization. Instead of changing your system, we work with you to make it better through enhancements and training. We offload tedious management and administrative tasks, so you can better serve your customers.

Reduce time spent on internal projects and enhance productivity with InStream. Ensure that your systems are up-to-date and secure without compromising focus on revenue-generating ventures.

Integrations

InStream will combine the tools of your business through custom integrations of disparate systems and develop a pipeline for seamless communication. We develop specialty integrations that allow applications to communicate with one another for streamlined, scalable reporting that helps uncover critical insights into every corner of your business.

Maintenance and Management

To keep your business running with minimal interruption, InStream professionals will complete system maintenance and management objectives for you. We will check your network security and ensure that the firewall is protected and your intrusion prevention is updated. Our staff will update on-premise servers or cloud-based software to keep your team focused on critical tasks.

Enhancement

Using InStream to manage your renewals will keep your software current without disrupting the daily schedule of your employees. Know that your solutions will be up-to-date and work with maximum efficiency. InStream will manage transitions and functionality when scaling your solutions to different departments.

Development and Customization

If you have a wish list for your management software and you cannot find it off-the-shelf, turn to InStream for a fully customized solution to handle business processes. Our staff will develop code to modify programs and integrate systems to benefit your existing solutions through workflows and widgets.

Fax Management

Fax technology is still heavily used across industries to send information and documents in an efficient manner. InStream will process the information, key data as necessary, and introduce the faxed information into your digital workflow for enhanced efficiency.

IT Security Audit

Managing the security protocols surrounding your data is paramount to our team. InStream provides regular penetration testing to ensure that authorization levels, passwords, and firewalls are performing to their maximum ability. InStream can provide the same level of audit services at a lower cost to your organization. We can help ensure that your data is safe against firewall and virus penetration.
